

Guidelines for the Nonprescription and Cosmetic Industry Regarding Non-therapeutic Advertising and Labelling Claims

Overview

How do you determine what advertising and labelling claims are properly representing your product according to legislative or regulatory requirements?

Which kinds of claims require pre-market authorization from Health Canada and which do not?

ASC's *Guidelines for The Nonprescription and Cosmetic Industry Regarding Non-therapeutic Advertising and Labelling Claims* (*Guidelines*) have two principal purposes:

- 1) To provide guidance to the nonprescription drug industry regarding acceptable wording for **non-therapeutic claims** that appear on the labels and in advertising of nonprescription drugs and natural health products; and
- 2) To provide guidance to the cosmetic industry regarding which claims are considered **therapeutic**, and as such cannot appear on the labels or in advertising of cosmetic products.

This guidance is based on the principle that labelling and advertising for products that modify or restore organic functions in humans, or impact human disease, are permissible only on health products supported by appropriate evidence. It is the representation of a benefit to human health that determines the difference between a therapeutic claim and a non-therapeutic/cosmetic claim.

How to Use the Guidelines

About the Format

The *Guidelines* are organized by product area and are presented in a column format.

Column I provides a non-exhaustive list of claims that can be characterized as **non-therapeutic**.

- These claims must be true and verifiable with respect to the function of the product and the brand owner must be able to substantiate any claim made on the product or its advertising of that product. However such claims do not require prior authorization from Health Canada (HC).

Column II provides a non-exhaustive list of **therapeutic/health claims** used to represent drug or natural health products.

- These claims are reviewed by the Natural and Non-prescription Health Products Directorate (NNHPD) in advance of a product receiving its Drug Identification Number (DIN) or Natural Product Number (NPN). Only those product claims that have been authorized are acceptable for use in advertising or marketing.
- The exact wording of claims listed under “Therapeutic/Health Claims” may not be acceptable for individual products bearing a DIN or NPN. The wording of claims will be assessed during product review against evidence provided and other current policies and guidelines and may require elaboration or revision.

Important Information

- The guidance provided in this document applies to products that are applied topically for local action on the skin, including the skin inside the mouth.
- The claims set out as examples in Columns I and II are included for illustrative purposes only. The lists are not exhaustive, and should be used only as a guide.
- Claims must be true, verifiable and must accurately communicate product features, characteristics and performance.
- Each claim will be evaluated within the overall context of the advertisement/label/name and net impression will be taken into account.
- The *Guidelines* are a helpful tool for those involved in advertising claims. They do not have the force of law and should be used in conjunction with the *Food and Drugs Act*, the *Food and Drug Regulations*, the *Natural Health Product Regulations*, the *Cosmetic Regulations*, the *Consumer Packaging and Labelling Act and Regulations*, the *Competition Act* and other applicable legislation, regulations and guidance documents.

Acknowledgment

The publication of these *Guidelines* represents the culmination of a collaborative effort among Advertising Standards Canada, Health Canada (HC), and other stakeholders. These *Guidelines* will be reviewed and updated regularly to reflect Canada's evolving regulatory framework and dynamic marketplace.

The claims are examples only; must be true, verifiable and accurately communicate product features, characteristics & performance; and will be evaluated within the context of the advertisement/label/name and net impression will be taken into account.

Column I – Non-therapeutic Claims

Examples of claims that are characterized as non-therapeutic that do not require prior authorization by HC
The list is not exhaustive

Column II – Therapeutic/Health Claims

Examples of claims that must be assessed by HC prior to market authorization
The list is not exhaustive

Antiperspirants

NON-THERAPEUTIC CLAIMS	THERAPEUTIC/HEALTH CLAIMS
<ul style="list-style-type: none"> Antiperspirant Any duration statement (e.g. 24, 48 hour) Helps keep you dry Protects against wetness Reduces (or provides protection against) underarm perspiration Extra effective 	<ul style="list-style-type: none"> Hyperhidrosis* Persistent protection based on a mechanism of action that modifies organic function Problem/Excessive perspiration References to perspiration from hormonal/endocrine changes or malfunction
<ul style="list-style-type: none"> Clinical (qualified as clinical testing) Clinical protection (must be qualified with “clinically proven extra effective wetness protection”) Clinically tested/proven/trials 	<ul style="list-style-type: none"> Clinical (unqualified) Clinical protection (unqualified) Clinical/Therapeutic strength/effect/action
<ul style="list-style-type: none"> Body responsive Controls odour/Anti-odorant

Other Claims

NON-THERAPEUTIC CLAIMS

THERAPEUTIC/HEALTH CLAIMS

ENDORSEMENT

- Dermatologist tested
- Recommended/Developed by doctors/ dermatologists/ beauticians

- Prescription strength / Rx / Pr

INGREDIENT (e.g. vitamins, antioxidants, etc.)

- Ingredient/Vitamin/Mineral/Antioxidant produces cosmetic benefit
- Contains vitamins which act as antioxidants to preserve product integrity or to keep product fresh

- Active/Effective/Medicinal/Therapeutic ingredient
- Contains/Source of vitamin X (unqualified)
- Contains/Source of vitamins which act as antioxidants (unqualified)
- Any reference to therapeutic effect of vitamins/ antioxidants (e.g., free radical scavenging)
- Any reference to repairing damage
- Any reference to action at a cellular level (living)
- Any reference to dose units (e.g. IU)

HEALTHY

- Healthy (from an appearance perspective)
- Skin looks and feels healthy

- Promotes health
- Biological/Therapeutic action/effect

ORGANIC

- Organic (product must meet a recognized standard for organic certification)
